1. Application Setup – Overview Tab Adjustment

In the **Program Setup → Application Setup** section, **comment out (hide/disable)** the **Overview Tab**.

Data Flow Adjustment:

- The content displayed in the **Overview** section of the **Live Preview** and the **Incubation Programs slide** should no longer be sourced from the Application Setup.
- Instead, this content must be pulled directly from the **Program Description** field located under **Program Profile**.
- Ensure that any updates made to the Program Description in the Program Profile are automatically reflected in the Live Preview and public landing page overview sections.

2. Application Deadline – Dynamic Date Source

In the **Application Setup** section, the **Application Deadline** field should no longer be a manual input.

- The deadline date must be **automatically populated** from the **Timeline** section (Section 2).
- Specifically, extract the date associated with the timeline entry labeled **"Application Closes"** (or equivalent).
- This ensures consistency between the program timeline and the application deadline displayed to users.
- If the "Application Closes" timeline entry is modified, the Application Deadline field should update accordingly.

3. Legacy Program Slides – Migration to Program Setup

The currently existing, manually populated incubation program slides on the **Incubation Programs Landing Page**—specifically:

- **Zantchito**
- **GJA&Y**
- **AgriInnovation Incubation**

—must also be made accessible and visible within the **Program Setup** section of the admin dashboard.

Requirements:

- These legacy programs should appear in the admin's program list alongside newly created programs.

- Admins should be able to **view, edit, and manage** these programs just like any newly created program.
- Ensure all existing data (descriptions, timelines, benefits, eligibility, etc.) is preserved and correctly mapped to the new Program Setup structure.
- Any modifications made to these programs in the admin dashboard should reflect immediately on the public landing page.

4. Content Removal – Landing Page

Remove the following section entirely from the **Incubation Programs Landing Page**:

Section Title:
"What Is Business Incubation?"

Content to Remove:

- The introductory paragraph beginning with: *"Business incubation is a structured support process…"*
- The paragraph beginning with: *"At Emerge Livelihoods, our incubation programs combine…"*
- The four feature blocks:
    - **Structured Learning** – "Weekly sessions with expert facilitators covering every aspect of business building."
    - **1:1 Mentorship** – "Matched with an industry mentor who guides you throughout the entire journey."
    - **Peer Cohort** – "Build alongside a community of entrepreneurs facing the same challenges."
    - **Investor Access** – "Demo Day exposure to angels, VCs and development finance institutions."

This content should be completely removed from the public-facing landing page.

5. Styling – "Your Journey Through Incubation" Section

In the **"Your Journey Through Incubation"** section, adjust the visual styling of the **dashes/bars** that appear between the step numbers:

- **Height:** Set the height of each dash/bar to **2px**.
- **Background Color:** Set the background color of each dash/bar to `#ffffff` (white).

This ensures a clean, minimal visual flow between the numbered steps in the journey timeline.

6. "Ready to Start Your Incubation Journey?"

In the **"Ready to Start Your Incubation Journey?"** call-to-action section:

- **Remove** the right-side button labeled **"Apply to GJA&Y"**.
- Update the remaining **"Apply Now"** button so that it **scrolls the user directly to the "Available Incubation Programs"** section on the same page, where the incubation program slides are displayed once the user clicks it.

This streamlines the user journey by guiding all applicants to browse and select from the full list of available programs.

7. Stats Section – "Turn Your Idea Into a Thriving Business"

In the **"Turn Your Idea Into a Thriving Business"** section:

- **Remove** the stat card displaying **"$1.8M+ Alumni Funding"** entirely.
- Update the **"Active Programs"** card so that its displayed value is **dynamically populated** based on the number of incubation programs created and published by the admin in the **Program Setup** section.
    - Example: If the admin has created and published 5 programs, the card should automatically display **"5 Active Programs"**.
    - This count should update in real-time whenever programs are added, unpublished, or deleted.

This ensures the stats section always reflects accurate, up-to-date program availability.

8. Color Consistency – Badges, Icons, and Buttons

Apply the following color standards across the platform to ensure visual consistency:

Status & Action Badges:

- For badges displaying program status (**Coming Soon**, **Accepting Applications**, **Active**, **Closed**) and action labels (**Edit**, **Unpublish**):
    - **Background Color:** `#3B4167`
    - **Icon Color (for Edit/Unpublish):** `#FFFFFF` (white)
    - **Text Color (for status labels):** `#FFFFFF` (white)

Program Count Badge:

- For the badge displaying the number of created programs (e.g., **"1 program"**):
    - **Background Color:** `#3B4167`
    - **Text Color:** `#FFFFFF` (white)

Clickable Buttons:

- For **all primary clickable buttons** across the platform (e.g., Save Changes, Create Program, Apply Now, Edit, Unpublish):
    - **Background Color:** `#4C808A`
    - **Text/Icon Color:** `#FFFFFF` (white) — unless otherwise specified for disabled or hover states

This ensures a unified, professional appearance throughout the admin dashboard and public-facing pages.
