Timeline Tab – Admin Functionality

When the admin navigates to the **Timeline Tab**, an **"Add Timeline"** button should appear. Clicking this button should allow the admin to create a new timeline entry with the following fields:

- **Title** (e.g., "Applications Open")
- **Date** (e.g., "1 July, 2026")
- **Activity Description** – a brief description of what will happen on that date

Constraints:

- The activity description must not exceed **18 words** per timeline entry.

Live Preview Behavior:
Once timelines are added, they should be displayed in the **Live Preview** section of the **Program Setup** page. The layout should match the design used in the **"Incubation Programs"** slide—specifically, the structure under the **Available Incubation Programs** section on the Incubation Programs landing page (using `div class="flex flex-col items-center"`).

Program Profile Enhancements

1. Format Options

In the **Program Profile → Format** section, in addition to the existing **Virtual** and **Physical** options, add a third option: **Virtual & Physical**.

2. Progress Tracking in Program Profile

Display a **progress bar** with a **percentage indicator** at the top of the **Program Profile** page to show how much of the profile has been completed.

- The progress bar should **update dynamically** as the admin fills in each section.
- The bar's **color should change** progressively as the completion percentage increases.
- When the profile reaches **100% completion**, the progress bar should turn **green**, and a **"Completed"** status badge should appear immediately.

3. Progress Tracking in Application Setup

Apply the same progress bar logic to the **Application Setup** page, which includes the following tabs:

- Overview
- Timelines

- Benefits
- Eligibility

Requirements:

- Each fully completed tab should contribute **25%** to the overall progress.
- When all four tabs are completed (100%), the progress bar should turn **green**, and a **"Completed"** status badge should appear.

4. Create Program Button Logic

- The **"Create Program"** button should remain **disabled** until the admin clicks **"Save Changes"** in the **Live Preview** section.
- Once **"Save Changes"** is successfully clicked, the **"Create Program"** button should become **enabled**.
- This ensures that programs are only created after the admin has reviewed and saved their changes in the Live Preview.

5. Program Editing Capability

Admins must be able to **edit any previously created program** at any time.

- Provide an **"Edit"** option for each program.
- Allow admins to **modify any field** and **commit/save** the changes.
- Ensure that edits are reflected immediately in both the admin dashboard and the public-facing incubation programs landing page.

6. Automatic Display on Incubation Programs Landing Page

Every newly created incubation program should be **automatically added** to the **Incubation Programs Landing Page**, where entrepreneurs can browse and apply.

- Display program cards in a **carousel** or **paginated** layout.
- Show **three program slides at a time**.
- If more than three programs exist, enable navigation (e.g., next/prev arrows or pagination dots) to access additional slides.

7. Program Deletion

Admins should be able to **delete (unpublish) any incubation program** from the **Incubation Programs Landing Page** management view.

- Deletion should **remove the program only from the public landing page**, making it no longer visible or accessible to entrepreneurs.

- The program must **remain accessible in the admin dashboard** and **persist in the database** for record-keeping, editing, or potential republishing.
- Confirm deletion with a prompt to prevent accidental removal, and clarify that the program is being hidden from the public view, not permanently erased.

8. Action Notifications

Implement **pop-up notifications** (toasts or modals) to inform the admin of successful actions, including but not limited to:

- Saving changes
- Creating a new program
- Editing an existing program
- Deleting a program
- Completing profile or setup sections

Each notification should clearly state the action performed and confirm its success.
